PROJECTS

Heart Disease Predictor | Python

Dec. 2023 - Jan. 2024

- Implemented a Heart Disease Predictor using Python, leveraging Pandas and NumPy for data manipulation and analysis.
- Utilized Matplotlib and Seaborn to visualize key insights, providing a clear representation of data patterns and correlations.
- Employed machine learning models, including Linear Regression, Logistic Regression, and Support Vector Classification (SVC), to analyze and predict heart disease risk based on input parameters.

Student Management | C#, Oracle, Bunifu UI, SQL

March. 2023 - April. 2023

- Developed a comprehensive Student Management System using C#, Oracle Database, and Bunifu UI for an intuitive and visually appealing interface.
- Designed and integrated distinct user interfaces for teachers and administrators, ensuring role-specific functionalities and secure data access.
